

## Changes from the previous version.

1. Removed the need to manually set the center value (position) of the Rz axis. This value is set automatically during calibration when the pedals return to center on their own. It is this value of the axis position that is taken as the central position after the end of the calibration.
2. Partially changed the graphical interface.
3. Due to lack of demand, the utility for testing pedal axes has been removed.

**IMPORTANT!!! BEFORE INSTALLING THE NEW VERSION OF THE PROGRAM, REMOVE THE OLD VERSION OF THE PROGRAM FROM YOUR COMPUTER!!!**
